

Government Slams the Hammer: No More Mining in the Sacred Aravalli Range!

Image 1 (Real):

 Original Image

Image 2 (Pexels):

Summary:

The Centre has directed all states to immediately stop issuing any new mining leases in the Aravalli range, a decision officials say is meant to shield one of the country's most threatened ecological zones. Authorities emphasised that the government is fully committed towards long-term protection of the Aravalli ecosystem, recognising its critical role in conserving biodiversity.

Detailed analysis:

This ban marks a major policy shift toward environmental conservation, reflecting the government's priority on preserving biodiversity and water recharge zones. For UPSC aspirants, note the link to the National Forest Policy, the role of the Ministry of Environment, Forest and Climate Change, and potential impact on mining sector revenues and local livelihoods.

Summary:

Vikran Engineering shares rose sharply on Wednesday after the company secured a Rs 2,035 crore EPC order from Onix Renewables for developing 600 MW AC solar projects in Maharashtra. The turnkey project, to be completed in 12 months, strengthens Vikran's renewable energy portfolio and boosts its order book.

Detailed analysis:

Large renewable EPC contracts reflect India's push for clean energy. For competitive exams, note the link between government renewable targets, corporate order books, and the impact on balance-sheet growth and sectoral GDP contribution.

Summary:

Over the last 50 years, the gibbon population has plummeted from over an estimated 100,000 individuals to less than 5,000

Detailed analysis:

The article highlights innovative conservation tools—stress-testing habitats and drone surveillance—critical for preserving the western hoolock gibbon, a species listed as endangered. For UPSC and state-level environmental exams, candidates should note the role of technology in biodiversity protection, the legal framework under the Wildlife (Protection) Act, and the importance of habitat connectivity in the Northeastern states.

Ancient Flood Fury: How a 1,000-Year-Old Deluge Sank a Bronze-Age City

Image 2 (Pexels):

Summary:

According to new research, some urban-like structures at Keezhadi were likely buried a little over a thousand years ago — around 1,155 years before present in scientists' phrasing — and this burial was related to a high-energy flood event that deposited sands and then finer silts and clays on the floodplain

Detailed analysis:

Linking paleo-hydrology with archaeological decline, the story underscores how extreme flood events can reshape human settlements. Exam-takers should connect this case to climate-change-induced flood risks, the importance of river-basin management, and the interdisciplinary methods (sedimentology, radiocarbon dating) used in heritage conservation studies.

Image 2 (Pexels):

Summary:

Congress leader Jairam Ramesh said the redefinition of the Aravallis was opposed by the Forest Survey

Detailed analysis:

The controversy revolves around the alteration of the official definition of the Aravalli range, which could affect forest-cover assessments, mining clearances, and biodiversity safeguards. Candidates must understand the legal implications under the Forest Conservation Act, the role of the Forest Survey of India, and how political decisions can impact ecological zoning and climate-mitigation strategies.

Image 2 (Pexels):

Summary:

The rarely-used eight-unit Fisk power plant owned by Houston-based NRG Energy was scheduled to retire next year, but then came AI

Detailed analysis:

The piece reveals a paradox where rapid AI adoption spikes electricity demand, prompting the re-commissioning of high-emission peaker plants. For competitive exams, focus on the energy-policy nexus: grid reliability, peak-load management, carbon-pricing impacts, and the need for renewable-energy integration to meet India's NDC commitments while supporting digital infrastructure growth.
