Summary:

Team of scientists study more than two lakh soil samples to find out impact of loss of natural soil carbon, suggests measures to Governments to address situation

Detailed analysis:

The study links excessive fertiliser use to a sharp decline in soil organic carbon, amplifying climate change impacts. For UPSC and state civil service exams, this highlights the intersection of agriculture policy, climate mitigation, and sustainable land management—key topics in Environment and Ecology sections. Candidates should note the policy recommendations, the scale of the survey (over 200,000 samples), and the role of ICAR, as they can be asked in essay or case-study questions.
