Image 2 (Pexels):

Summary:

Annual streamflow in the Indus Basin rose 8% since 1980, but fell 17% in the Ganga Basin; more rain boosted flow in the Indus, Jhelum, Chenab, but not in the Ravi and Sutlej, with implications for the suspended Indus Waters Treaty

Detailed analysis:

The study highlights divergent trends in two major river basins, underscoring climate-induced variability. For UPSC and other government exams, it signals the need to understand water-resource management, the strategic importance of the Indus Waters Treaty, and potential policy shifts toward rain-water harvesting in the Ganga basin. Candidates should relate this to sustainable development goals, inter-state water disputes, and climate-change adaptation strategies.
