Image 2 (Pexels):

Summary:

India's State governments have in the past employed private companies to seed clouds, when their regions faced drought; the results have been hit-and-miss.

Detailed analysis:

The trial highlights the growing interest in weather modification as a drought mitigation tool, but also underscores scientific and policy challenges when attempts contradict meteorological advisories. Aspirants should note the interplay between research institutions, state policy, and environmental feasibility.

Image 2 (Pexels):

Summary:

This Norwegian island caught the world's attention in June 2019 when it was featured as the first place to try living without a time zone — a story that turned out to be a tourism campaign. Still, on Sommarøy, life naturally feels free of strict time boundaries.

Detailed analysis:

Sommarøy illustrates how cultural narratives and tourism can shape environmental perception. Aspirants should consider how such stories influence sustainable tourism policies and community resilience.

Image 2 (Pexels):

Summary:

Due to a lack of sufficient moisture and saturation during the winter months of December and January, cloud seeding is a non-viable solution that offers only short-lived benefits, says the study.

Detailed analysis:

The report provides scientific evidence against cloud-seeding during winter, emphasizing the need for season-specific water-resource strategies. Important for exams: understand atmospheric parameters that affect weather modification efficacy.
